Executive Summary

This report details the results of the 2025/26 St Leger Homes of Doncaster Tenant Satisfaction Measures (TSM) survey.

The survey is required by the Regulator of Social Housing to generate annual tenant perception measures. St Leger Homes of Doncaster commissioned Viewpoint Research CIC survey to complete the survey through a single method approach of telephone surveys. A total of 1014 surveys were completed.

The report presents results for all questions showing counts (actual number of responses) and percentages to one decimal place. Commentary to the results will typically group answers to give a combined satisfaction score (fairly satisfied and very satisfied answers added together), differences are highlighted between key demographics alongside summaries of the open text questions which asked for reasons for dissatisfaction.

Further analysis is provided with a key driver analysis to investigate how opinion-based questions have been influencers on overall satisfaction, and benchmarking against the 2024/25 TSM data provided by the Regulator.

Further analysis

Key Driver Analysis

A Key driver analysis was carried out to learn more about the overall satisfaction score, specifically which of the other questions were most related to the overall satisfaction score.

Note - The analysis produces a correlation coefficient (or r value for short) with can range from -1.0 to +1.0. This rating can be interpreted using the following guide:

- An r value close to 1 indicates that there is a strong relationship between the two variables
- A positive r value means that as one variable increases in value, the other variable will increase in value.

TP06 – Listens to views and acts upon them had the strongest link to overall satisfaction, as was also the case in 2024/25.

Again similar to the last two surveys, the quality of the home comes out as very important to tenants with ‘home being well maintained’ and the ‘overall repairs service’ both featuring prominently.
